trouble with its food. Well bables are plump, only the sick are thin. Are you sure the food is all right? Children can't help but grow, they must grow if their food nourishes them. Perhaps a mistake was made in the past and as a result the digestion is weakened. If that is 50, don't give the baby a lot of medicine; just use your every-day common sense and help nature a little, and the way to do it is to add half a teaspoonful of

SCOTT'S **EMULSION**

to the baby's food three or four times a day. The gain will begin the very first day you give it. It seems to correct the digestion and gets the baby started right again. If the baby is nuri-ling but does not thrive, then the mother should take the emulsion. It will have a good effect both upon the mother and child. Twenty-five years proves this fact.
